- * Sanhoury Scientific and Cultural Club, Department of Private Law.

Preamble of the Conference:

Work accidents and humiliating diseases are phenomena associated with the worker's activity. Although researchers interested in studying this type of danger agree that they are sudden, they emphasize that they have direct and indirect human and material causes that lead to their occurrence and even their recurrence as long as those causes are present and influential.

Work accidents and occupational diseases are social risks that receive great attention in terms of their prevention and coverage of the damages resulting from them. In the midst of work techniques characterized by continuous renewal and the resulting injuries that are difficult to prove, the Algerian legislator, similar to the legislation of comparative countries, has made insurance coverage for work accidents and occupational diseases mandatory and automatic, which has made it easier for the worker to benefit from the privileges guaranteed by social security laws.

The insurance coverage guaranteed by social insurance for the injured worker is sometimes insufficient, so the general rules granted the victim a license that enables him to benefit from an additional privilege for compensation that he obtained according to social security laws. Accordingly, the injured worker can obtain compensation according to the rules of tort, but with the availability of a set of conditions that usually raise several problems that we are trying to raise and answer through this forum.

Objectives of the Conference:

- ❖ Raising the issues that workers face if they are exposed to occupational hazards following their claim for compensation
- ❖ Raising the issue of the possibility of obtaining additional compensation for what the worker usually receives from social security services, which most workers are usually unaware of.
- ❖ Explaining how to obtain compensation, which usually raises several problems for the injured worker.

Conference Issue:

Considering that the compensation received by the injured worker in some cases is insufficient to compensate for the damage he sustained, how did the rules of civil liability contribute to compensating for damages resulting from occupational risks, given that occupational risks are subject to insurance coverage within the framework of social security laws?

Conference Themes:

The first axis: Conditions and procedures for benefiting from compensation for occupational risks within the framework of social security laws.

The second axis: Types of performances that benefit the injured party within the framework of social security laws

The third axis: The possibility of obtaining supplementary compensation for damages suffered by the worker (the legal basis for applying liability rules to obtain supplementary compensation)

Axis Four: Conditions and procedures for obtaining supplementary compensation.

Participation Conditions:

- 1- The paper should be original, unpublished, and not previously presented at other scientific forums, nor reextracted from a thesis or dissertation.
