### Residence LSG

The campus in Romania was perfect from all sides specially the relation of workers with the residents

### Office

The work conditions during our researches in the office were great and teachers worked on providing that for us

### Roman culture

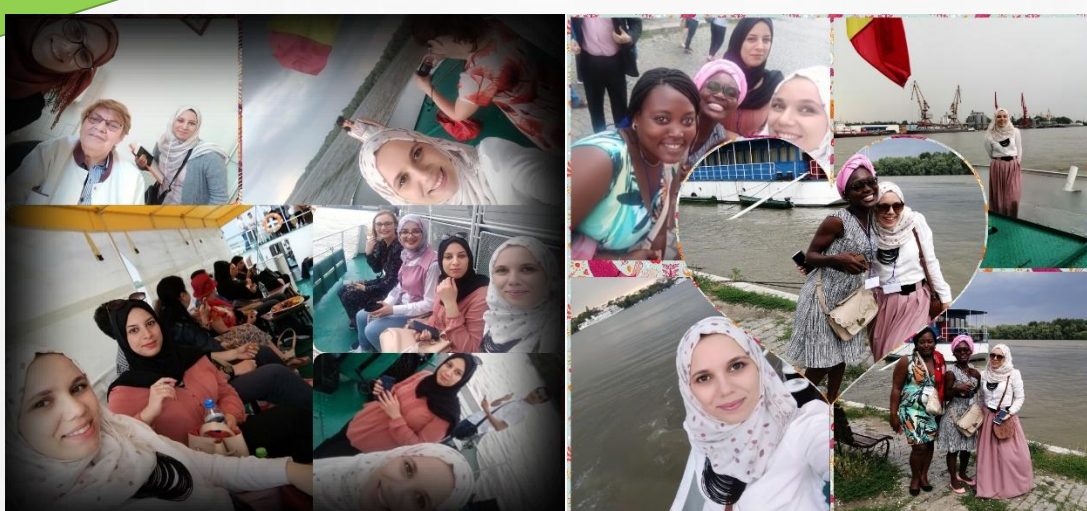

We learnt a lot about the Romanian culture from the organized visits to the historical museums

### Foods

One of the most beautiful experiences was trying the Romanian food specially Babachi cake

### Relationship with students

The conferences and the scientific visits gave us the chance to meet and have friends from all around the world. Which was great to learn about different cultures

### Relationship with our professors

In this experience I have met the best teacher ever Prof. Carmen Catalina RUSU who was not only my teacher but a friend and a support at the same time in addition to many other supervisor teachers who I had the honor to know them

### Scientific outings

We visit The URB factory with some engineers

### Scientific Conference

Our participation in such experience helped us to raise our level after contacting and working with great teachers.

### Defense in Romania

After six months of work I have graduated with excellent grade

### Work in laboratories

I worked in the laboratory on my master thesis entitled "Condition-based maintenance for the optimization of smart manufacturing processes using infrared thermography".
